This lessons explains the so far easiest way to transfer or copy all developer certificates and provisioning profiles to a new computer

1. Xcode - Export Developer Profile (Apple ID and codesigning assets)

The following steps explain how to export your Apple developer Profile in Xcode.

1.1 Xcode - Export developer profile - 1

Accounts		
General Accounts Behaviors Navigation	Themes Text Editing Key Bindings Source Contro	Platforms Locations Server & Bots
Apple IDs	Apple ID	
A matunas@m	Apple ID: matthias@m-r-d.de Description: matthias@m-r-d.de	
<i>t.</i> .	Team	Role
	Matthias Rebbe	Admin
3	4 Download Manual Pro	files Manage Certificates
Import Apple ID and Code Signing Export Apple ID and Code Signing	Assets	

In Xcode open the preferences

- 1. In preferences click on Accounts
- 2. Select your developer Account
- 3. Click on the circle icon with the 3 dots
- 4. select Export Apple ID and Code Signing Assets...

1.2 Xcode - Export developer profile - 2

Favorites Nolte mamp Desktop Music 	Save As: Untitled.dev Tags:	eloperprofile	1
🕗 Downloads	Name	Kind Size	e Date
🗎 aktuelle Projekte	mrTEST.developerprofile	Developer Profile	57 KB Heu
🗎 MattDocs	Ddeveloper.p12	personange file	3 KB Heu
😻 Dropbox	Dinstaller.p12	personange file	3 KB Heu
🗎 Oki-Scans 🗎 Videos		0	
 matthias Applications Macintosh HD Syn1821_2 Eingang-Quart 	Enter the password used to secure the Dev Password: Verify:	eloper Profile	6
 VMs WidgetCourse 	New Folder	3 Cancel	Save 4

In the new dialog window

1. enter the desired filename of the export file

2. Enter a password (this password is later needed to import the file in Xcode on the new computer)

3. re-enter the password

4. Press Save

You will then asked several times for a password to access the private keys in your key chain.

1.3 Xcode - Export developer profile - 3

Accounts		
General Accounts Behaviors Navigation		ntrol Platforms Locations Server & Bots
Apple IDs matthias@m-r-d.de matthias@m-r-d.de	Apple ID	
	Developer Profile Exported	
	1 account, 3 code signing identities, and 2 provisioning profiles were successfully exported.	Role
	ОК	Admin
	Download Manual	Profiles Manage Certificates

After successful export you'll see a pop-up window showing the total number of accounts, code signing identities and provisioning profiles* that were exported.

* please see the note about Provisioning Profiles in the chapter about Importing the developer profile into Xcode on a new Mac.

2. Xcode - Import developer profile (Apple ID and codesigning assets) - 1

The following steps explain how to import a developer profile back into Xcode on a new Mac

2.1 Xcode - Import developer profile (Apple ID and codesigning assets) - 1

	Accounts
633 General Accounts Diaviors Navigation 1	hemes Text Editing Key Bindings Source Control Platforms Locations Server & Bots
0	
No Accounts	Click the add (+) button to create a new account
2	
+ - O Import Apple ID and Code Signing	Assets
Export Apple ID and Code Signing	Assets

On the new computer either double click the export file and continue with step 4 or open Xcode and go to Preferences

- 1. In Preferences click on Accounts
- 2. Click on the circle icon with the 3 dots
- 3. select Import Apple ID and Code Signing Assets...

- 4. in the next dialog select the file which contains the exported developer profile
- 5. enter the password you've entered when exporting

2.2 Xcode - Import developer profile (Apple ID and codesigning assets) - 2

Accounts		
General Accounts Behaviors Navigation	Themes Text Editing Key Bindings Source Control Platforms Locations Server & Bots	
Apple IDs S@m: 	Apple ID	
1	Developer Profile Imported 1 account and 3 code signing identities were successfully imported. OK Role	
+ - 0	2 Download Manual Profiles Manage Certificates	

After successful import you'll see a pop-up window showing the total number of accounts, code signing identities *and provisioning profiles* that were imported.

1. Press okay to close the pop-up window.

Note: It seem that although the developer profile contained also provisioning profiles (see 1.3) those provisioning profiles were not imported back.

2. S to load those provisioning profiles from your developer account just click on **Download Manual Profiles.**

To check if the provisioning profiles were downloaded go to folder ~/Library/ MobileDevice/Provisioning Profiles
